

Best service and functionality

In Italy, Enerray is the leading company in planning, design, construction and management of photovoltaic systems of medium and large dimensions. The company is entirely operated by SECI Energia (Maccaferri Industrial Group). An elevated quality of service is characteristic for Enerray.

Maccaferri Industrial Group— here the headquarters in Zola Predosa (Bologna) is the parent company of the PV project developer Enerray.

Maccaferri Industrial Group was founded in 1879 when the Maccaferri family created an industrial production of gabions and wire drawing mills known as “Gabbioni Maccaferri”. Soon, Officine Maccaferri became a company specialized in design and development of infrastructural solutions for erosion control and the strengthening of the structure. In the year 2009, Maccaferri Industrial Group closed with a consolidated turnover of around € 1.1 billion with more than 4,000 employees in 53 plants around the world.

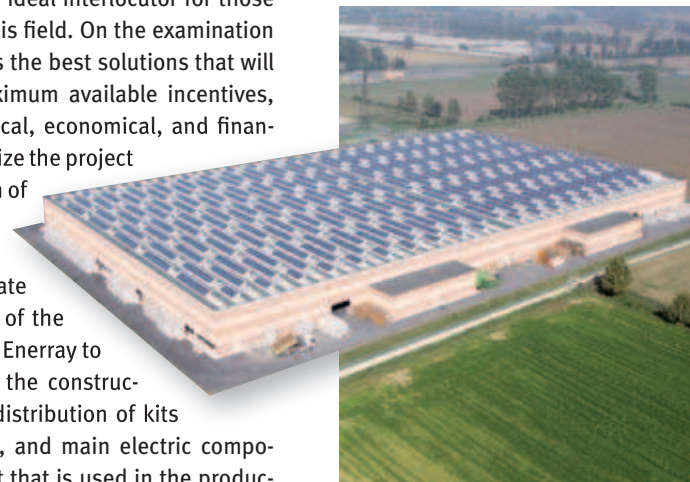

Strong due to the affiliation with an important industrial group, with over 130 years of history, Enerray offers turnkey solutions of photovoltaic systems on company coverage, platforms and grounds nominating itself as a reliable partner, capable of guaranteeing the best service and functionality of its plants. The philosophy of its work is that of establishing a solid partnership with its clients, guaranteeing a continuous collaboration following the Life Cycle Benefit.

The Enerray offer is based on a solid experience in continuous development built, thanks to more than 30 MWp photovoltaic systems installed in the last two years and the 50-60 MWp in construction that will be developed by the year 2010. Taking advantage of the obtained know-how, Enerray has increased its portfolio within the past years, acquiring a significant, growing number of projects. The company operates on the whole national territory making use of its technical workplace and its qualified subcontracting firms that assure high-quality and homogeneous results to its clients.

The principal know-how, the track record of the carried out projects as well as the consolidated rela-

tionship with the GSE and the main credit institutions, make Enerray the ideal interlocutor for those who want to invest in this field. On the examination stage, Enerray identifies the best solutions that will help to obtain the maximum available incentives, emphasizing the technical, economical, and financial elements that optimize the project and make the evaluation of the investment transparent. The economies of scale and the adequate planning in the finding of the main components allow Enerray to be competitive in both the construction of plants and the distribution of kits (solar panels, inverters, and main electric components). Each component that is used in the production of the systems is chosen with utmost care and attention on the world market. This is easily done by taking advantage of its abiding partnerships with the leading suppliers, and by researching the best relation among quality of the product, reliability of the business, and the costs to sustain. Enerray completes its service of planning and production of its plants by suggesting an O&M contract for twenty years that makes use of an advanced monitoring system of plants and assures maintenance and guarantee to the client for the duration of the feed-in tariff.

If by the end of 2010 the incentive tariffs of the “Conto Energia” (legal framework for the system) in Italy are progressively lowered, Enerray confirms the outstanding performance of the investments in this field for the years to come by maintaining the high-quality standards for which it is known.
