As a renowned EPC company, Sinosol has built a track record in Germany, France, Spain, Italy, Ukraine, and China, looking at a total of more than 60 MW installed solar projects. In its wholesale operations Sinosol is active in all relevant European solar markets. Its presence in China provides

Sinosol with direct access to the most important PV sourcing market and ensures close relations to leading suppliers. As a PV systems vendor it supplies a complete range of certified and bankable

products, with a choice from solar modules, inverters, mounting technology, as well as off-grid systems.

A second mainstay of the company is the development, construction, and operation of turn-key solar power plants. In 2010, Sinosol continually strengthened this part of its activities in Italy. In collaboration with its partner Metalco & Mazzanti Group S.r.l., Sinosol founded MMS Energia Solare S.r.l., an Italian PV development & EPC company located in Castelfranco (Veneto). The company has developed a large pipeline of Italian rooftop and greenfield projects, and is active as an EPC for institutional investors.

With Metalco and Mazzanti, Sinosol has teamed up with two strong local partners for project development and realization in the strategically important Italian market. Mazzanti S.p.A. is a Florence-based construction company with numerous reference projects in the field of PV rooftop systems. Metalco S.p.A. is an internationally active metal construction company based in Castelfranco (Veneto), that offers innovative solutions for PV applications.
