An exceptional experience

➤ SolarMarkt Italia S.r.l., based in Seriate, near Bergamo, designs and produces photovoltaic (PV) systems across Italy. Its parent company, SolarMarkt AG, based in Freiburg (Germany), boasts a 25-year tradition and extensive experience in designing and producing large-scale PV systems.

The company stands out for its technological development and the valuable innovation brought to the field of mounting and fixing. Initially involved only in distribution, “we have now grown into an international company,” says Rinaldo Pelliccioli, Managing Director of SolarMarkt Italia. “Today we operate all over Europe, where we have built systems of every type and size, always striving to deliver the solution that best meets our customers’ needs. We are expert in creating large PV systems for commercial premises, car parks, greenhouses, facades and special roof coverings, but also in designing and producing large ground-mounted “turnkey” PV plants. We employ a team of experts with various professional backgrounds, to follow the customer throughout the project. Working in close contact with our customers, we look for the solution suited to their requirements, then we design and produce systems made of high-quality components which, as a result, are also

long-lasting and have low running and maintenance costs. Our services range from designing to building, but we also offer insurance to cover the risks involved in the building stage or for the whole lifespan of the system. Last but not least, we provide help and advice to customers applying for financial incentives or bank loans. We rely on an efficient network of financial partners and investor pools.”

SolarMarkt Italia S.r.l. provides all-in-one service and assistance:

- Design and production of PV systems
- General contractor
- Turnkey solutions
- Maintenance
- Monitoring
