

Building a SolarWorld

SolarWorld's mission is to enable reliable, eco-friendly and safe power supplies around the world. Based on research and innovation, the company offers its customers highly-efficient and economic PV systems with an emphasis on design. SolarWorld – a name that stands not only for “Made in Germany” but also for a strong brand.

> In its broad product portfolio, SolarWorld offers its customers solar panels in all power classes. With its Sunmodule Plus, the company has also developed an innovative module concept. The Sunmodule Plus modules are produced at state-of-the-art and fully-automated production facilities in Germany and the United States and ensure yield stability and excellent product properties. SolarWorld uses a unique plus sorting: the performance of every module is determined using an oversized “flasher”. Only modules flashed with the rated power or higher are delivered to the customers.

And SolarWorld goes even further: the new DIN certification of its test laboratory at the production location in Freiberg, Germany (Saxony), ensures high manufacturing quality. Quality assurance and production processes meet standards accepted by testing and calibration laboratories worldwide and operate with the same transparency, expertise, and neutrality as external institutions.

Made in Europe

SolarWorld AG is one of the few manufacturers that offer premium quality “Made in Europe” – on all the stages of the value chain. SolarWorld's main suppliers are also Germany-based manufacturers. This means that the Italian investors and end customers that use SolarWorld modules benefit from the 10 % bonus paid out on top of the feed-in tariff through Conto Energia IV, which requires that most of the component parts must be manufactured in the European Union. This has been confirmed through a certificate by the Germany-based TÜV Rheinland. SolarWorld is committed to its production location in Freiberg, which was further expanded and modernized this year. “The high manufacturing quality in Freiberg has for more than ten years been the guarantee for our tried and tested and repeatedly award-winning quality products. For this reason, we are deliberately sticking to Germany as our production location with its high environmental and social standards and are also keeping value creation in the country,” says Dr.-Ing. E. h. Frank Asbeck, CEO of SolarWorld AG.

In Italy, SolarWorld puts its focus on high-performance modules and innovative products, which

are offered in form of system kits and tailored to the needs of the Italian customer. One example is the company's SunCarport, which combines a traditional carport with a high-performance solar energy roof that has been adjusted to the Italian market. Another highlight is SolarWorld's innovative roof-integrated PV system Sundeck, a combination of future-oriented energy production with high aesthetic standards and design. Premium Sunmodule Plus modules guarantee best performances. SolarWorld's Sundeck is a roof-integrated solution mounted directly to the substructures. Its modular design allows for a harmonious integration of the PV system into the overall visual appearance of the roof and meets the maximum requirements for a leak-proof roof membrane.

30 years of expertise

SolarWorld offers its customers 30 years of production expertise, a 25-year linear performance guarantee and a product warranty that is extendable to 10 years, certified quality including high levels of resistance of the modules to ammonia and corrosion in salt mist as well as exclusive technical support, trainings and efficient marketing services.
